Summary

An infinity calendar is a flip calendar. you flip the box to move the date or month by one.

2.85 hrs	1 pcs	0.20 mm	0.40 mm	PLA	61 g	Prusa MK4

Household > Office

This is an infinity flip calendar. Flip it back to increase the date/month.

No support is required.

The lids close with a satisfying click. The tiles (dates and months) are printed with 2 colours. I used a black and white pattern in this make. The first and last 2 layers only. The GCode file is set for changing the filament twice during the print for a Prusa MK4. The tiles are numbered for an easy assembly.

It is my first model. Let me know if I can improve on it !
