## Summary

Design for luminaire

[3D Printers](#) > [Voron Parts & Upgrades](#)

Tags: [light](#) [voronoi](#) [patron](#) [luminaria](#)

We propose a luminaire design, creating different pieces that could be adapted to what most users possess as a conventional spotlight, giving them a new perspective and aesthetics. These are pieces based on simple geometric shapes, which are made up of Voronoi patterns. This consists of a two-piece set, a base that has the standard measurements of a socket, and another part that covers the bulb, giving it a different view.
