☠T-VIRUS☠

Presenting the T-Virus Lamp from the Resident Evil movie.

My Daughter is obsessed with Zombie Films and Games, so I thought why not make her very own T-Virus Light.

To add lights you'll Need 1m LED Strip Lights, RGB COB LED's are the best choice as they are much brighter than standard LED strips and gives you the option to change the color to suit your mood. If your using RGB lights then it recommended to use White or Clear filament for the spiral tubes.

No supports necessary but id recommend using a brim for the spiral tubes and the umbrella logo.

once printed you'll need to glue the spiral tubes and logos to the base and top, then thread the lights and screw the caps on the base and top.

Once printed be sure to post your make and follow me to stay updated with more cool designs.

If you want to see how i designed this with an iPad here's a video.
